

Innovation. Performance. Dependability.

Our Business, Your Solution

Over fifty years ago, the foundation was laid for the company that is now Cummins Filtration. Since then, our customers around the world have come to depend on us to provide quality solutions for protecting their equipment. As the world's leading designer and manufacturer of filtration, coolant and fuel additive technology for all engine-powered systems, Cummins Filtration and our industry-leading Fleetguard products provide the best protection available.

We reached this position by never remaining satisfied with the status quo. From the introduction of the first spin-on bypass filters in 1959 to our completely non-metallic lines of lube, fuel and air filtration technologies, Cummins Filtration keeps pushing the envelope to set the standards of excellence in our business. Our engineering teams have been recognized as the best minds in this industry, and they work hard to create not just better products but the best possible solutions for our customers' demands. As we do so, however, we also remain ever mindful of our responsibilities to the environment.

We are committed to creating products to protect the world in which we live – products like our award-winning crankcase ventilation systems, which reduce oil drips and blowby gases; glycerin-based coolant using non-toxic glycerin; and user-friendly filters, with no metallic pieces, no adhesives and no paint. Not only are we striving to make better products, we are making our manufacturing processes better, too. Cummins has committed to a 25% reduction in greenhouse gas emissions by 2010. Cummins Filtration takes this commitment seriously, and we are taking the necessary steps to meet or exceed this goal, such as designing new facilities to reduce the need for electric lighting.

By adhering to the Cummins core values, using Six Sigma tools and incorporating lean manufacturing and business processes, Cummins Filtration continues to grow and improve. Fifty years ago, we had a handful of employees. Today we have operations on six continents and several thousand employees. We are the people who make up Cummins Filtration, and we are the company upon which you can depend.

A handwritten signature in black ink, appearing to read 'Joseph Saoud'. The signature is stylized and fluid, with a long horizontal stroke extending to the right.

The Cummins Advantage

As a wholly owned business unit of Cummins Inc., Cummins Filtration provides a unique competitive advantage for our customers around the world. The dynamic synergy that exists among all Cummins global businesses ensures that our customers receive the most advanced technology, best sourcing and optimal delivery capabilities to meet their specific needs. From our local facilities on every continent, our team of dedicated employees and top quality suppliers are able to serve our customers more efficiently and effectively in their unique markets.

With a global customer base that includes hundreds of OEMs, thousands of dealers/distributors and hundreds of thousands of end users, Cummins Filtration offers dependability and reliability beyond OE specifications and customer requirements. Through our Fleetguard® brand of filtration, coolant and chemical products, we cover the widest scope of engine applications on the market, including:

- On-highway Heavy/Medium Duty Truck
- On-highway Bus
- Open Pit and Underground Mining
- Marine
- Agriculture
- Construction/Light Construction
- Oil and Gas
- Light Duty Automotive
- Power Generation
- Industrial
- Locomotive

Technology That Improves Your Bottom Line

Modern diesel engine systems have unique requirements, particularly the need for greater filtration capability. Fleetguard® products offer the proven and patented technology to protect your investment where it matters most.

Optimized Performance

Today's engines are more sensitive to microscopic contamination and water due to higher injection pressures and tighter tolerances. Every Fleetguard product is developed and tested in conjunction with the base engine package to ensure optimal performance by enhancing combustion and power while minimizing engine wear.

Increased Uptime

Higher power density, changes in oil formulations and exhaust gases cause higher production of soot and sludge in oil which increases engine wear. With options like nanofiber media and our award-winning StrataPore™ multilayer media, we provide our customers the best technology for maximum filtration efficiency, minimal flow restriction, extended service intervals and optimal filter life.

Enhanced Fuel Economy

Fleetguard products maximize fuel efficiency by removing smallest contaminants; maintaining appropriate coolant flow rates, enhancing fuel lubricity, and lowering soot by 40% over the service interval. Our lightweight and smaller products, like our User-Friendly Filters, reduce fuel costs during transport.

Lower Operating Costs

When engine systems are properly maintained with Fleetguard products for normal and extended service intervals, overall operating costs decrease, including acquisition, installation and removal, inventory, transaction and disposal costs.

Environmental Safety

Cummins Filtration partners with our customers to help manage the impact of current and future global emission regulations. We developed the Fleetguard Diesel Exhaust Fluid to assist the modern internal SCR system reduce NOx emissions. Our products enable customers to meet these challenges by lowering exhaust emissions, extending service intervals and reducing hazardous waste.

Products That Provide Real Value

With the many filtration, coolant and fuel additive choices on the market, it is more important than ever to select a brand you can depend on to maintain your valuable equipment to the highest standards of performance and protection. With the value package of Genuine Fleetguard, you are guaranteed reliable performance and maximum protection for the life of your engine.

Coolant & Fuel Additive Products

Our advanced engine treatments include a complete line of state-of-the-art antifreeze coolant, SCA conditioners and fuel additive products. We offer cleaner, non-toxic alternatives such as Propylene Glycol and Glycerin for environmental safety and sustainability. For monitoring cooling system performance, we feature a complete line of testing supplies and lab services.

Fluid Filtration & Conditioning Systems

We custom-design high-performance filtration systems for engine lubricating oil, transmission, fuel and hydraulic applications. These performance-tested systems feature a variety of media with particle retention capabilities to micrometer filtration that enhance protection without sacrificing quality.

Air Intake Systems

Our state-of-the-art technology in air intake systems and components meets or exceeds global OEM specifications for maximum quality and performance. Advanced composite materials, optimum efficiency and space-saving design make Fleetguard OptiAir™ and Direct Flow™ perfect for modern engine compartments, where real estate is at a premium.

Committed to Customer Support Excellence

We know you rely on Cummins Filtration after the sale as much as when you place an order. Our commitment is to meet your needs beyond the sale with world-class service. We do this by creating processes that start with listening to the voice of our customers, implementing lean organization principles, and using Six Sigma tools for continuous improvement.

It is our privilege every day to troubleshoot your unique maintenance needs and provide support to protect your investment. Through all our support services, we strive to make your business easier. Our approach to integrated system maintenance creates a one-stop shopping advantage that allows you to purchase all your filtration, coolant and fuel additive products with one single transaction.

Whenever you need us, our global Customer Assistance Centers are ready to provide you with outstanding service, including:

- **Personal assistance** in any time zone in multiple languages
- Expert **technical advice** by phone, fax or online
- **Field site visits** by trained technical staff
- Customized **maintenance kits** with specified parts
- **Interactive web site** updated daily with new product and service information at cumminsfiltration.com
- **FleetMaster** e-mail response within 24 hours
- Complete **online catalog** with interactive information support
- **Fleetguard Access™** order and shipment tracking, invoice and inventory inquiries
- Non-prorated global **Warranty**
- Fleetguard Master **Catalog on CD** with Fleet Manager

We Are Cummins. You Can Depend On Us.

A company is defined by the people it hires to serve its customers. We are very proud that the people who work for Cummins Filtration are the best employees in the industry, because we recruit, train and retain only exceptional people who are passionate about customers. We believe our most important job is to exceed your expectations in everything we do.

As a Cummins company, we operate within a system of Core Values that defines how we think and behave in our daily work. In every business transaction, whether designing a product, inspecting a part, taking your order or shipping the final carton, these values reflect our mission:

- We take care of the customer
- We obsolete our own products
- We build quality into everything we do
- We truly value our people
- We are good citizens
- We are never satisfied
- We do what's right

Our responsibility to serve our customers extends to protection of the global environment we share. We are committed to do our part to make our planet cleaner and safer. Every product we manufacture is designed to have the least harmful effect on air, water, plant and animal life by minimizing the effects of soot, sludge, oil drips, exhaust emissions and hazardous disposal. As part of the Cummins family, we are dedicated to develop the products of tomorrow that will protect our natural resources for future generations.
